

Cold, Drafty! - ETS May Be The Answer!

SALE

The Steffes Comfort Plus Series Heating Systems

The Steffes Comfort Plus Series heating systems are a type of Electric Thermal Storage (ETS) equipment which utilize low cost, off-peak electricity to provide economical and comfortable heating. ETS systems convert electricity to heat during off-peak hours and store that heat in specially designed ceramic bricks. Off-peak hours are those times during the day or night when electricity is plentiful and Steuben REC can supply it at a lower cost. Steuben REC offers discounts in rates up to 30% for electricity used during off-peak hours. With this rate discount, members can realize significant savings in their energy bills when compared to alternative heating options. The use of off peak energy saves Steuben REC, it's members in high demand costs and the ETS members with the reduced off-peak rate.

These centrally ducted (forced air) units work as a stand-alone whole house heating system or can be combined with an Air Source Heat Pump. **MUST HAVE basement** to install heating system.

Call Kristen in the Member Service Department at 1-800-843-3414 or email kcleveland@steubenrec.com for more information on the ETS today!
